

# Sabbir Ahmed

## Full-Stack Product Engineer

Email: [sabbir@pixiefy.com](mailto:sabbir@pixiefy.com) | Phone: +880 1703 247842 | Location: Dhanmondi, Dhaka, Bangladesh

Website: <https://sabbir.bd> | GitHub: <https://github.com/nildoria> | LinkedIn: <https://www.linkedin.com/in/sabbir-ahmed-pix>

## PROFESSIONAL SUMMARY

---

Full-stack engineer who ships production web applications end to end: React and TypeScript interfaces, Node and Express APIs, and PostgreSQL schemas with access enforced at the database rather than in application code. Ten years of WordPress, WooCommerce and Elementor delivery underneath, covering custom plugin architecture, headless builds, store customisation, performance and technical SEO remediation, and hosting through launch.

## PROFESSIONAL EXPERIENCE

---

### Full-Stack Product Engineer

Self-Employed and Agency Projects | 2021 - Present

- Ship production web applications end to end: React and TypeScript interfaces, Node and Express APIs, and PostgreSQL schemas, deployed on Cloudflare Pages and Fly.io.
- Implement authentication and authorisation with OAuth 2.0, JWT sessions and PostgreSQL Row-Level Security, enforcing tenant isolation at the database rather than in application code.
- Integrate third-party platform APIs including the Gmail API, Stripe payments, and Google Cloud Pub/Sub webhooks with OIDC verification, with background workers handling renewal and reconciliation.
- Optimise delivery performance using sharded in-memory caches, tag-based revalidation and cache-warming endpoints so generated pages serve primed rather than cold.
- Build AI-assisted features with OpenAI embeddings and retrieval-augmented generation, combining keyword and vector search behind swappable provider interfaces.

### WooCommerce and Elementor Specialist

Freelance / Remote Clients | 2019 - Present

- Customised WooCommerce stores across product archives, single-product layouts, cart and checkout flows, custom order statuses, and packing slip and invoice output.
- Implemented AJAX cart updates, custom pricing rules, subscription display adjustments, product limit logic and affiliate product flows for live commercial stores.
- Built reusable Elementor-compatible animation widgets with GSAP and ScrollTrigger, including pinned and horizontal scroll sections, SVG draw, image reveal and text animation.
- Integrated client websites with Make.com, Zapier, Slack, Calendly and CRM lead-submission flows over REST APIs and webhooks.

### WordPress Engineer

Pixiefy | 2015 - Present

- Developed custom WordPress plugins with organised, maintainable architecture, including Elementor widget registration, admin settings pages, asset enqueueing, AJAX endpoints and WooCommerce integration.
- Troubleshoot plugin conflicts, caching and NitroPack issues, duplicate URLs and Google Search Console errors; improved Core Web Vitals and technical SEO across client sites.
- Managed hosting and launches end to end: VPS and Ubuntu server setup, Nginx reverse proxy, SSL provisioning, Cloudflare configuration, DNS records (MX, TXT, SPF, DKIM, CNAME), domain pointing and migration.
- Delivered accurate design-to-web implementation with responsive layouts and cross-device quality assurance.

## SELECTED PROJECTS

---

### Pinbox - Shared Inbox for Teams

Full-Stack Product Engineer | <https://pinbox.pages.dev>

- Multi-tenant team inbox with workspace isolation enforced by PostgreSQL Row-Level Security on every read and write.
- Gmail push notifications delivered through Cloud Pub/Sub webhooks with OIDC verification; background workers renew watches and reconcile state.
- Rich-text composer sanitised with DOMPurify, closing the cross-site scripting surface that contentEditable email editing opens.
- Technologies: React, TypeScript, TanStack Query, Node.js, Express, Gmail API, OAuth 2.0, PostgreSQL, Supabase, Cloudflare Pages, Fly.io.

### Lineflow - Headless WordPress Storefront

Full-Stack Engineer | <https://catalog.allaround.co.il> | <https://github.com/nildoria/lineflow>

- Next.js storefront over headless WordPress, with the REST API proxied server-side so WordPress credentials never reach the client.
- Stripe payment intents and webhooks for checkout, Cloudinary uploads, and a dedicated PostgreSQL layer with its own versioned migrations.
- Sharded in-memory slug index behind the framework cache with tag-based revalidation and warm endpoints, so generated pages serve primed rather than cold. Built right-to-left aware; the deployed instance runs in Hebrew.
- Technologies: Next.js, React, headless WordPress, PostgreSQL, Stripe, Cloudinary, JWT authentication, Zod, Zustand, Radix UI, Tailwind CSS.

### Knowli - AI Support Chatbot for WordPress

Plugin Architect | <https://github.com/nildoria/knowli>

- WordPress-native RAG chatbot across three plugins; indexes pages, posts, products and PDFs, then answers from that content with citations rather than unsourced generation.
- Hybrid retrieval combining BM25 and keyword providers with cosine similarity over 1536-dimension OpenAI embeddings, behind search and answer interfaces so either half can be swapped independently.
- Confidence scorer gates answering versus handoff; intent and emotion detection shape response tone. PSR-4 architecture with versioned schema migrations.
- Technologies: PHP, WordPress, OpenAI API, RAG, vector search, BM25, MySQL, PSR-4, Composer.

## TECHNICAL SKILLS

---

**Frontend:** React, TypeScript, Next.js, TanStack Query, TanStack Router, Tailwind CSS, Vite, GSAP, HTML5, CSS3, JavaScript

**Backend and APIs:** Node.js, Express, PHP, REST APIs, webhooks, Gmail API, OAuth 2.0, Google Cloud Pub/Sub, background jobs

**Databases:** PostgreSQL, Row-Level Security, advanced SQL, schema design, migrations, MySQL

**WordPress and E-commerce:** WordPress, WooCommerce, Elementor, Elementor Pro, custom themes, plugin development, Advanced Custom Fields, Oxygen Builder, headless WordPress

**AI and Automation:** OpenAI API, retrieval-augmented generation, vector search, BM25, Make.com, Zapier, n8n, Lovable

**Security:** JWT and session handling, least-privilege access, HTML sanitisation, cross-site scripting prevention, secret management

**Hosting, Deployment and DevOps:** Cloudflare, Fly.io, Supabase, Docker, Nginx, VPS, Ubuntu, SSL provisioning, DNS management, Git

**Performance and SEO:** Core Web Vitals, caching and CDN debugging, canonical URL handling, Google Search Console, plugin conflict resolution
