Full-stack engineer who ships production web applications end to end — **React and TypeScript** interfaces, **Node and Express** APIs, and **PostgreSQL** schemas with access enforced at the database rather than in application code. Ten years of **WordPress, WooCommerce and Elementor** delivery underneath: custom plugin architecture, headless builds, store customisation, performance and technical SEO remediation, and hosting through launch.

EXPERIENCE

Full-Stack Product Engineer

2021 — Present

Self-Employed & Agency Projects

- Ship production web applications end to end — **React and TypeScript** interfaces, **Node and Express** APIs, and **PostgreSQL** schemas — deployed on **Cloudflare Pages** and **Fly.io**.
- Implement authentication and authorisation with **OAuth 2.0**, JWT sessions and **Row-Level Security**, enforcing tenant isolation at the database rather than in application code.
- Integrate third-party platform APIs — **Gmail API**, **Stripe** payments, and **Cloud Pub/Sub** webhooks with OIDC verification — with background workers handling renewal and reconciliation.
- Optimise delivery performance using sharded in-memory caches, tag-based revalidation and cache-warming endpoints so generated pages serve primed rather than cold.
- Build AI-assisted features with **OpenAI embeddings** and retrieval-augmented generation, combining keyword and vector search behind swappable provider interfaces.

WooCommerce & Elementor Specialist

2019 — Present

Freelance / Remote Clients

- Customised **WooCommerce** stores across product archives, single-product layouts, cart and checkout flows, custom order statuses, and packing slip and invoice output.
- Implemented AJAX cart updates, custom pricing rules, subscription display adjustments, product limit logic and affiliate product flows for live commercial stores.
- Built reusable Elementor-compatible animation widgets with **GSAP and ScrollTrigger** — pinned and horizontal scroll sections, SVG draw, image reveal and text animation.
- Integrated client sites with **Make.com, Zapier, Slack, Calendly** and CRM lead-submission flows over REST APIs and webhooks.

WordPress Engineer

2015 — Present

Pixiefy

- Developed custom WordPress plugins with organised, maintainable architecture — Elementor widget registration, admin settings pages, asset enqueueing, AJAX endpoints and WooCommerce integration.
- Troubleshoot plugin conflicts, caching and NitroPack issues, duplicate URLs and Google Search Console errors; improved **Core Web Vitals** and technical SEO across client sites.
- Managed hosting and launches end to end: **VPS/Ubuntu** setup, **Nginx** reverse proxy, SSL provisioning, Cloudflare configuration, DNS records (MX, TXT, SPF, DKIM, CNAME), domain pointing and migration.
- Delivered accurate design-to-web implementation with responsive layouts and cross-device QA.

SELECTED PROJECTS

Pinbox — Shared Inbox for Teams

Full-Stack Product Engineer

[pinbox.pages.dev](#)

- Multi-tenant team inbox with workspace isolation enforced by Postgres Row-Level Security on every read and write.
- Gmail push notifications delivered through Cloud Pub/Sub webhooks with OIDC verification; background workers renew watches and reconcile state.
- contentEditable composer sanitised with DOMPurify, closing the XSS surface that rich-text email editing opens.

React · TypeScript · TanStack Query · Node.js · Express · Gmail API · OAuth 2.0 · PostgreSQL · Supabase · Cloudflare Pages · Fly.io

Lineflow — Headless WordPress Storefront

Full-Stack Engineer

[catalog.allaround.co.il](#) · [github.com/nildoria/lineflow](#)

- Next.js storefront over headless WordPress, with the REST API proxied server-side so WP credentials never reach the client.
- Stripe payment intents and webhooks for checkout, Cloudinary uploads, and a dedicated Postgres layer with its own versioned migrations.
- Sharded in-memory slug index behind the framework cache with tag-based revalidation and warm endpoints, so ISR pages serve primed rather than cold. Built RTL-aware; deployed instance runs in Hebrew.

Next.js · React · Headless WordPress · PostgreSQL · Stripe · Cloudinary · JWT auth · Zod · Zustand · Radix UI · Tailwind CSS

Knowli — AI Support Chatbot for WordPress

Plugin Architect

[github.com/nildoria/knowli](#)

- WordPress-native RAG chatbot across three plugins; indexes pages, posts, products and PDFs, then answers from that content with citations rather than unsourced generation.
- Hybrid retrieval — BM25 and keyword providers alongside cosine similarity over 1536-dimension OpenAI embeddings — behind search and answer interfaces so either half swaps without touching the rest.
- Confidence scorer gates answering versus handoff; intent and emotion detection shape response tone. PSR-4 architecture with versioned schema migrations.

PHP · WordPress · OpenAI API · RAG · Vector search · BM25 · MySQL · PSR-4 · Composer

TECHNICAL SKILLS

Frontend	React, TypeScript, Next.js, TanStack Query & Router, Tailwind CSS, Vite, GSAP, HTML5, CSS3, JavaScript	Backend	Node.js, Express, PHP, REST APIs, Webhooks, Gmail API, OAuth 2.0, Cloud Pub/Sub, background jobs
Databases	PostgreSQL, Row-Level Security, advanced SQL, schema design, migrations, MySQL	WordPress	WooCommerce, Elementor & Elementor Pro, custom themes, plugin development, ACF, Oxygen Builder, headless WP
AI & Automation	OpenAI API, RAG, vector search, BM25, Make.com, Zapier, n8n, Lovable	Security	JWT & session handling, least-privilege access, HTML sanitisation, XSS prevention, secret management
DevOps	Cloudflare, Fly.io, Supabase, Docker, Nginx, VPS/Ubuntu, SSL, DNS, Git	Performance	Core Web Vitals, caching & CDN debugging, canonical URLs, Search Console, plugin conflict resolution
